Rencontres R, Grenoble, June 2015

Modeling in science

- ABC is concerned with **mechanistic models** that aim to mimic the biological or physical processes that are thought to have given rise to the data.
- Mechanistic models are different from **phenomenological models** that seek only to best describe the data using a statistical model.

The ecological detective: confronting models with data (Hilborn and Mangel, 1997)

An example of mechanistic model fitted with ABC

Vernot and Akey, Science 2014

What is ABC ?

“ABC is a ‘democratizing’ method in that it will attract, for example, biologists, who enjoy computer simulation but have little background in probability, into converting their favorite simulation into a tool for inference”

Beaumont and Rannala, Nat Rev Genet 2004

Two approximations in ABC

- Replace *full posterior* $p(\theta|D)$ with *partial posterior* $p(\theta|\mathbf{s}_{obs})$ where θ is the parameter of interest, D are the data, and \mathbf{s}_{obs} are *summary statistics*.
- Sampling from $p(\theta|\mathbf{s}_{obs})$ is not based on likelihood computations but on numerical simulations.

Rejection algorithm for parameter inference

- Simulate n values θ_i , $i = 1, \dots, n$ from the prior π
- Simulate n (possibly multivariate) summary statistics \mathbf{s}_i according to $p(\mathbf{s}_i|\theta_i)$
- Accept the simulations for which $d(\mathbf{s}_i, \mathbf{s}_{obs})$ is smaller than a given threshold (d is a distance function).

Pritchard et al., MBE 1999

Bayesian data analysis

ABC includes all aspects of Bayesian data analysis.

- 1 Parameter inference (Posterior distributions).
- 2 Model comparison (Model Probabilities, Bayes factors).
- 3 Goodness of fit (Posterior predictive check, Goodness of fit hypothesis testing).

Software and R packages for ABC

Name	R package	Simulations	Comment
<i>abc</i>	Yes	No	Generalist
<i>abctools</i>	Yes	No	Dimension reduction
<i>ABCtoolbox</i>	Yes	No	Generalist
<i>ABC-SysBio</i>	No	Yes	Systems Biology
<i>DIYABC</i>	No	Yes	GUI for Population Geneticists
<i>easyabc</i>	Yes	No	MCMC-ABC

Parameter inference with the *abc* function

Model selection with the *postpr* function

Goodness of fit with the *gfitpca* function

Perspectives

ABC methods, algorithms and software are well established and widely used. New and unforeseen applications will foster methodological developments.
